Sewing A Ribbing Cuff

Ribbing fabric comes in either a tube or a flat fold, and is typically sold by the running inch. To figure the length you will need for your cuff, you need to measure the length of your cuff, double that number and add 1”. Most cuffs for example are 3” and so you would need 3” x 2 + 1” or 7” total length per cuff.	Using the 3” cuff example above, you’ll then cut 2 cuffs that are 6” wide by 7” long. (Remember these numbers are for our example and you’ll need to measure your jacket and determine the width you need.) If you are using flat fold ribbing make sure you double the fabric.	Fold your ribbing material in half with the right sides together, and stitch the length of the cuff. In our example this is 7”.		Now fold your cuff in half, wrong sides together and attach to your sleeve.
