

### ★ We're Committed to Quality

Conant Custom Brass is committed to producing products of outstanding quality. This commitment is based on the premise that exceptional products will stand the test of time. Experience with antiques in our restoration division has inspired us to produce products of the same lasting integrity as those we restore every day.

### ★ Warranty

All of our products are guaranteed against defects in manufacturing. For warranty information, replacement parts and accessories for any of our great Home & Garden Products, please visit the warranty section of our web site: [www.conantcustombrass.com](http://www.conantcustombrass.com) or contact us at the address listed on the back of this pamphlet.

### ★ Our Other Fine Home & Garden Products ★

Since 1979, we have been producing practical lifetime products that stand the test of time. Our growing Home & Garden collection includes clocks, barometers, hygrometers and thermometers in brass, copper, stainless steel, chrome and aluminum, as well as solid copper bird feeders, brass stem supports for supporting precious blooms, pluviometers for measuring rainfall, decorative dust corners for stairs and embossed solid brass wreath hangers.

### The Vermont Rain Gauge (Model #VRG-1)

★ *Guaranteed for Life!* ★

### ★ **Why Solid Brass?**

We use solid brass for its traditional quality and its natural resistance to corrosion. The brass components of this product have been lightly oxidized to enhance its beauty and advance the natural aging process. Left alone, it will attain a rich dark patina. We did not apply a protective coating to the surfaces of this product because there is no clear coating that lasts as long as the raw metal itself. If you prefer the bright look of polished brass, feel free to polish the components by hand occasionally.

### ★ **Ideal Rain Gauge Placement**

For an accurate measurement of rainfall, place your rain gauge in an open area away from overhanging trees and approximately ten feet from buildings.

### ★ **Avoid Freezing!**

Be sure to bring in your rain gauge before air temperatures reach the freezing point. This will keep it safely free of ice which can expand and break the vial.

### ★ **Replacing the Vial**

Forget to bring in your rain gauge? No problem. Simply visit the Home & Garden section of our web site: [www.conantcustombrass.com](http://www.conantcustombrass.com) or contact us at the address listed on the back of this pamphlet.

### ★ **Our Packaging**

We've chosen brown recyclable packaging materials because they do the job with the least earthly impact. Please recycle this packaging. Just think, it may serve you in another form some day and that's really cool!

### ★ **Guaranteed for Life!**

If the performance of this product ever falls short of your expectations, we will do everything possible to restore your confidence. All of our products are guaranteed to provide a lifetime of service and value.
