

H-D® MOTORCYCLES NEON SIGN

USE EXTREME CAUTION WHEN REMOVING FOAM FROM AROUND THE NEON. THE GLASS IS HAND BLOWN AND VERY, VERY DELICATE.

Carefully remove twist ties that may hold the sign to the box. Please report damage in the first 72 hours after receipt. Never pick up the sign by the neon tubes – only use the metal grid. Never operate the sign outdoors. Do not get any water or liquid on the sign. Neon operates best at room temperature; it may not start up in cold settings. It can be stored in the cold but works best at room temperature. Pull the on/off pull chain several times when you first get the neon sign if it is not powering up. Over the years if a section of the sign grows dim it can easily be fixed. A neon sign is made up of several hand blown bulbs. If part of a bulb has gotten dark carefully rotate the sign (*holding the metal grid*) so the small black ball in the tube moves from the bright end of the bulb to the dark end. Once it gets to the dark end the neon will be bright again.
