

NetSuite Education Needs Assessment

*The success or failure of a major software application deployment or upgrade has a direct correlation with the thoroughness of the training provided.**

An Education Needs Assessment is the crucial first step in creating a thorough training plan to ensure your organization's maximum use of NetSuite.

Kerman Camacho, NetSuite's Education Services Advisor, will work with your management team to identify your goals and assess your users' skills. He will craft a customized learning plan based on:

- ✓ Your users' individual roles and responsibilities
- ✓ Your NetSuite features and functionality
- ✓ Your business processes and objectives

This customized plan will be submitted to you for review and approval.

To ensure that goals and skills are addressed based on your needs, your plan will take advantage of NetSuite's various education offerings: Free Training, Project Team Training or End User Training

Training Is Not A Singular Event

Implementing a training plan that reinforces your organization's business processes and objectives is critical to the successful initial implementation of NetSuite.

For those who have implemented NetSuite already, completing a needs assessment and implementing a training plan – at any stage of the NetSuite lifecycle – will help ensure that all your team members continue to use NetSuite to its fullest.

Following your custom training plan will result in:

- ✓ Better utilization of NetSuite
- ✓ More skilled and developed users
- ✓ Better return on your NetSuite investment

Let's do more together!
