

Boss, this is Mercury. I've got a small meteor inbound that could deviate my orbit and send me into the sun. Can You adjust?

Venus here. Boss, I need a host of weather patterns created to keep my rotation stable. Thanks!

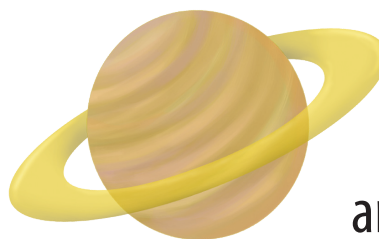

Earth calling! Our orbital tilt is off by .07 degrees. We don't want a snowstorm in the Bahamas. Boss, please correct it, ASAP!

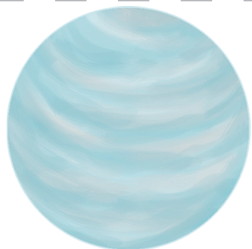

Boss, this is Mars. I need some mass displacement on my northern hemisphere. You can use the humans' rover if You want.

Jupiter calling! Hey, I have 50 moons! Boss, will You stabilize my gravity ASAP? Moon 45 is nearing Moon 23!

Boss, some micro-meteors are threatening my lovely rings again. Speeding up comet 72348849 should do it. This is Saturn, by the way.

Uranus here. My density is getting dangerously low. Boss, can You increase my mass so I don't float away?

Hey, Boss! Could You please tell Pluto to stop calling me? I can't get him into Club Planet, but he just doesn't believe me!
